

Smart Fire

The Smartwave SF3500 has been designed with a "Robson Series" hull which results in one of the most stable, safe and smooth riding boats of today. The SF3500 is constructed from twin skinned Polyethylene and foam filled using the B.I.F.F foam system so you can be assured it's virtually un-sinkable, indestructible and maintenance free. A long development program has achieved a strong and extremely robust boat suitable for even the most demanding user.

The SF3500's impressive deck space and excellent sea keeping performance make this craft ideal for water sports, fishing, rescue work or as a tough commercial workboat. The extensive features make the SF3500 a pleasure to use and effortless for single handed use or launching in difficult situations. Nick-named the "Bass Attack" by the fishing fraternity, the SF3500 is in it's element bouncing around amongst shallow, rocky reefs.

Specifications

Length: 3.5m (11.5ft)
 External Beam: 1.7m (5.6ft)
 Hull Weight: 125kg (220lbs)
 Max Horsepower: 25Hp
 Deadrise: 13deg
 Hull Material: Polyethylene
 Hull Thickness: 8mm

CE Details

Design Cat: D, Inshore
 Max rec. Load: 340kg
 Max # of People: 4
 Warranty: 5 years*
*Recreational. 1 Year Commercial.

Virtually indestructible, un-sinkable and maintenance free, Marine Revolution boats are your first choice in safety and durability. Rotationally moulded in top quality virgin grade polyethylene thermoplastic, Marine Revolution boats offer unrivalled hull thickness, positive buoyancy and a hull up to five times stronger than fibreglass. The Polyethylene contains powerful ultra violet stabilisers designed to survive in harsh environments. It is impervious to osmosis, corrosion, rot and rust and has no gelcoat or paint to maintain. A range of colour options for the hulls and cabins are available.

Marine Revolution boats also have the distinct advantage that they are fully recyclable. An important feature in a world where we are conscious of our impact on the environment.

The use of computer controlled equipment and the ability to mould in one-piece, double skin, without any structural stress points is a unique process. This process ensures quality and consistency is maintained at the highest level.
