

SMARTWAVE SW 2400

The Smartwave SW2400 dinghy has been designed with a "Robson Series" hull which results in one of the most stable, safe and smooth riding boats of today. The SW2400 is constructed from twin skinned Polyethylene and foam filled using the B.I.F.F foam system so you can be assured it's virtually un-sinkable. Years of development has achieved a strong and extremely robust boat, suitable for even the most demanding user.

The SW2400 has ample deck space lending it to multiple applications. Motor and oar provisions give maximum versatility as a yacht tender, pleasure boat, fishing dinghy or duck shooting platform. The bow eye provides a sturdy tow point and locking point for storage. Threaded inserts are pre installed to fit dinghy dolly wheels if required. For ease of transportation, this tough little dingy will fit on a roof rack, in the back of a pickup or on a small trailer.

Specifications

Length: 2.4m (7.9ft)
External Beam: 1.3m (4.3ft)
Hull Weight: 50kg (110lbs)
Hull Material: Polyethylene

Design Details

Max rec. Load: 270kg
Max # of People: 3
Max Horsepower: 5Hp
Warranty: 5 years*
*Recreational. 1 Year Commercial.

Virtually indestructible, un-sinkable and maintenance free, Marine Revolution boats are your first choice in safety and durability. Rotationally moulded in top quality virgin grade polyethylene thermoplastic, Marine Revolution boats offer unrivalled hull thickness, positive buoyancy and a hull up to five times stronger than fibreglass. The Polyethylene contains powerful ultra violet stabilisers designed to survive in harsh environments. It is impervious to osmosis, corrosion, rot and rust and has no gelcoat or paint to maintain. A range of colour options for the hulls and cabins are available.

Marine Revolution boats also have the distinct advantage that they are fully recyclable. An important feature in a world where we are conscious of our impact on the environment.

The use of computer controlled equipment and the ability to mould in one-piece, double skin, without any structural stress points is a unique process. This process ensures quality and consistency is maintained at the highest level.
